

Core

Deadline: Sunday of Week 6

Difficulty Level: Intermediate

Est. Time: 1 - 2 hrs

Users CRUD Modularized

Welcome to another Core assignment! Some students like to explore the assignments before they're finished reading through the lessons, and that's okay! It can be good for your brain to have a preview of what your future challenges might be. However, before you begin this assignment, it's important that you've first:

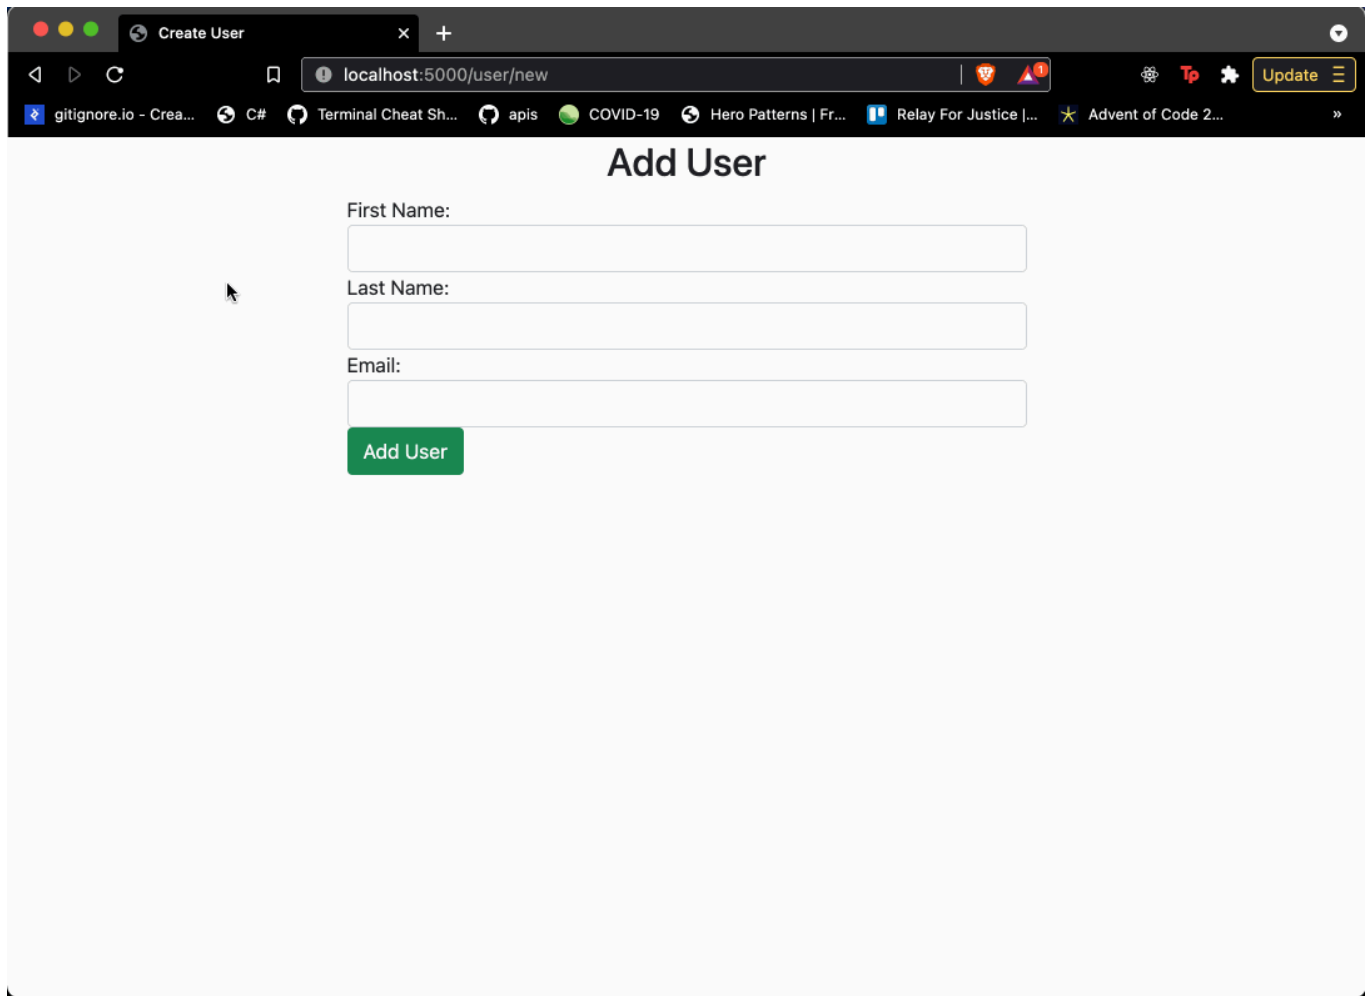

- Completed the preceding lesson modules
- Taken the knowledge checks to confirm your understanding
- Viewed lecture material related to the assignment topics
- Completed and submitted your practice assignments

Now, the Assignment:

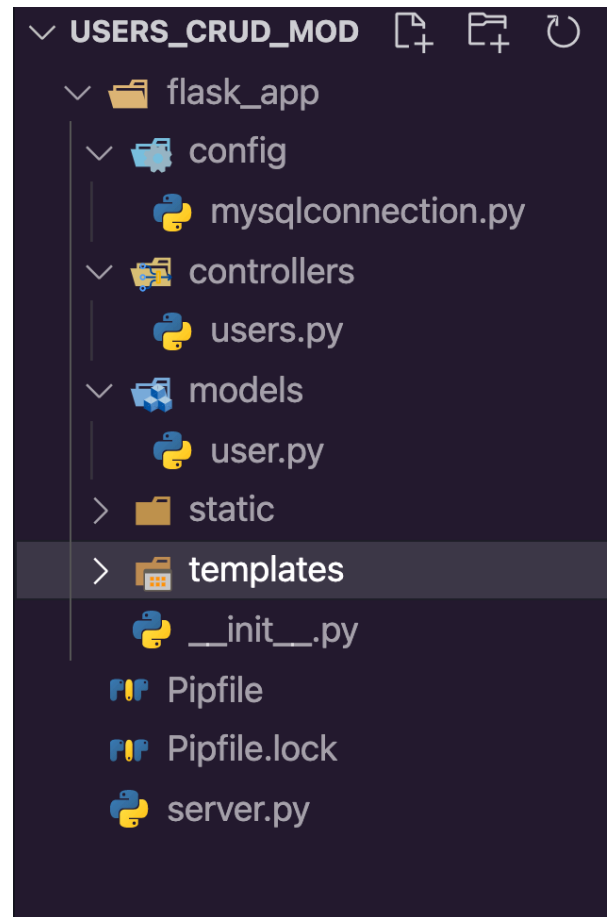

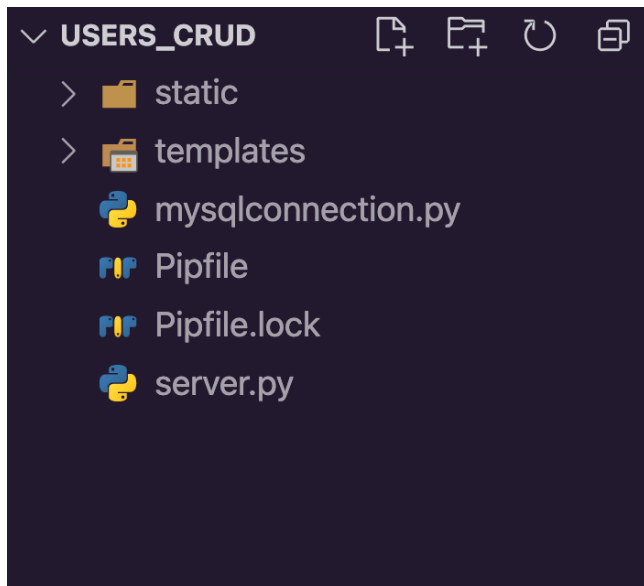

Learning Objectives:

- Students will modularize a Flask app.
-

The screenshot shows a web browser window with the title 'Create User'. The address bar displays 'localhost:5000/user/new'. The page content features a form titled 'Add User' with three input fields: 'First Name:', 'Last Name:', and 'Email:'. Below these fields is a green button labeled 'Add User'. The browser's tab bar shows several open tabs, including 'gitignore.io - Crea...', 'C#', 'Terminal Cheat Sh...', 'apis', 'COVID-19', 'Hero Patterns | Fr...', 'Relay For Justice [...]', and 'Advent of Code 2...'. The browser's top right corner includes an 'Update' button and a menu icon.

Take the previous assignment and modularize it to use the MVC pattern design.

- ☐ Go through the steps of modularizing the Users CRUD assignment
- ☐ Zip up the modularized folder and submit it
